

Potstream™

An innovative solution for watering your plants

The peeves of watering pot plants

When watering by hand you can waste water by over watering and washing away your potting mix.

You might have a range of pot plants with different watering requirements.

Your plants will require different amounts of water at different stages of their growth.

Your plants may be sun lovers, shade lovers or somewhere in between, meaning that they require different amounts of water.

Existing irrigation methods can be untidy.

Overwatering your potted plants can stain your paving or damage your decking.

A simple solution

Potstream™

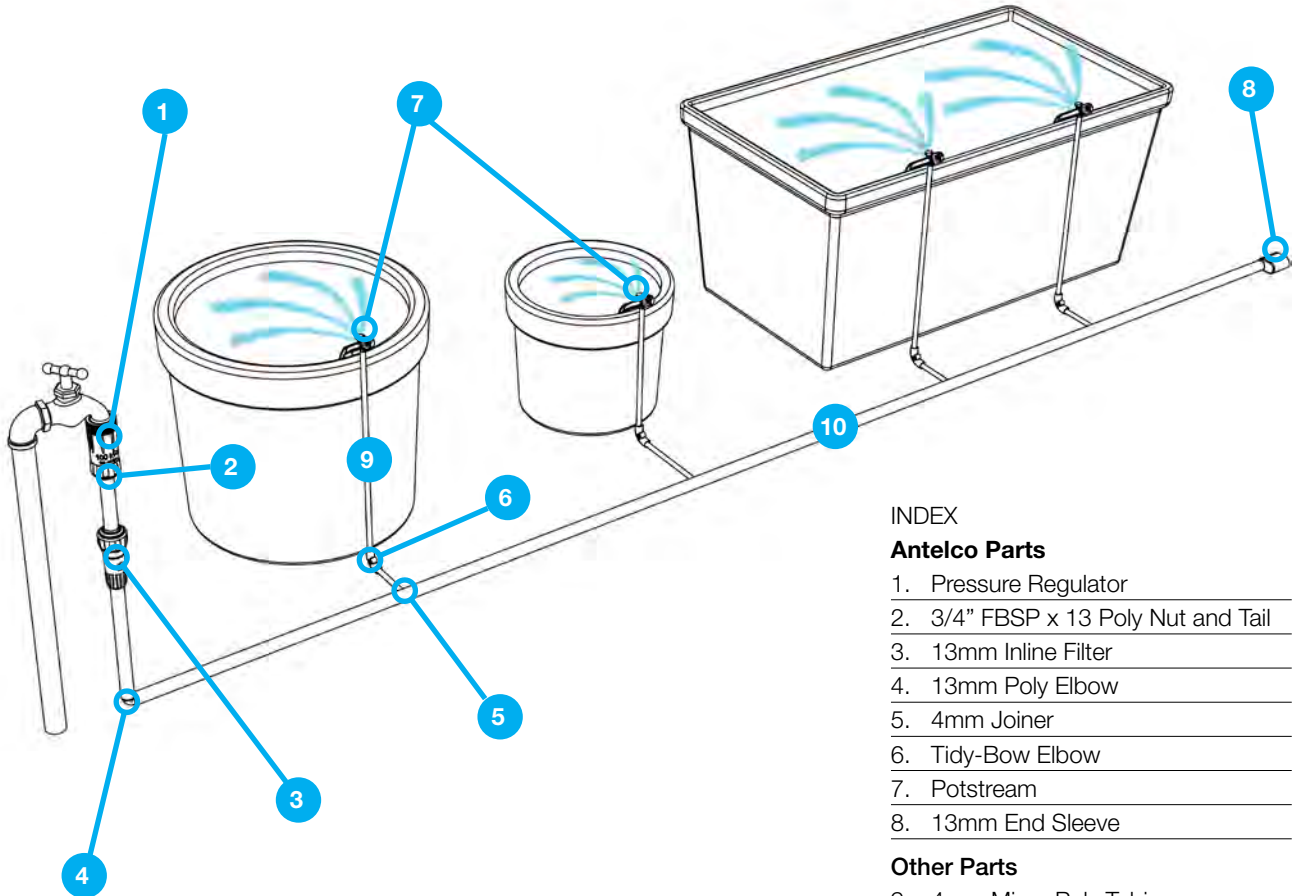

Simply turn the knob to adjust the amount of water for the plant

A gentle light watering is the result.

Typical Installation

INDEX

Antelco Parts

- | | |
|----|----------------------------------|
| 1. | Pressure Regulator |
| 2. | 3/4" FBSP x 13 Poly Nut and Tail |
